SUMMARY

Third-year AIML student at Atria Institute of Technology (CGPA 8.9), interest in Building a New Ai Future Prediction and Passionate about building real-world applications with Python, JavaScript, and SQL.

WORK EXPERIENCE

Student Developer / Independent Projects 2024 – 2025

- Developed a Machine Learning model for **Future Home Price Prediction**, applying regression techniques and data preprocessing to analyze housing datasets and predict prices with good accuracy.
- Built and deployed a **website interface** for the prediction model, integrating frontend (HTML, CSS, JavaScript) with backend (Python/Flask) to provide real-time price estimation.
- Gained practical exposure in end-to-end ML pipeline: data collection, model training, evaluation, and deployment as a web application.

PROJECTS

1.Real-time Object Detection using MobileNet SSD

[Link to Demo](#)

Used Python and OpenCV DNN to run MobileNet SSD in VS Code, detecting 20+ object categories via webcam with frame preprocessing, bounding boxes, and matplotlib-based visualization.

2.Online Hotel Booking (Mini DBMS Project)

Built a Python Tkinter-based desktop app with SQLite to manage movie records — added full CRUD functionality, linked frontend and backend, and used OOP principles for clean, modular code.

EDUCATION

2023 - 2027	B.Tech in AIML at Atria Institute of Technology	(CGPA: 8.9)
2023	Class XII (MPC), RNR SPSR Nellore (Dist)	(94%)
2021	Class X, GHS	(89%)

SKILLS

Languages & Frameworks : Java, C, Python, HTML, CSS, JavaScript

Databases : SQL (MySQL/SQLite), MongoDB (NoSQL)

Concepts : Data Structures & Algorithms (Python)

ACHIEVEMENTS / HOBBIES

Certified in Generative AI (Oracle). Active Core Member of AI Club.

Built academic projects using JavaScript and SQL; participated in coding contests.

Interested in exploring AI tools, strategy games, and anime storytelling.
